

Mathcad Prime 3.0 Essentials

Overview

Course Code TRN-4010-T

Course Length 2 Days

In this course, you will learn the basics of Mathcad Prime. You will learn about Mathcad Prime's extensive functionality, such as opening and working with Mathcad files, navigating workspaces, defining variables and expressions, and solving equations. In addition, you will learn how to plot graphs, solve for roots, and manipulate data.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in Pro/FICIENCY intended to evaluate your understanding of the course as a whole.
